The Anatomy of Mans Body, as the parts there  
of are gouerned by the twelue Ce-  
lestiall Signes.

Aries, Head and face.

Taurus,  
Neck and  
Throate.

Cancer,  
Brest and  
Stomacke.

Virgo,  
Bowels and  
Belly.

Scorpio,  
Secrets &  
Members.

Capricorne,  
The  
Knees.

Pisces, the feet.

Gemini,  
Armes and  
Shoulders.

Leo,  
Heart and  
Backe.

Libra,  
Reynes and  
Loynes.

Sagittarius,  
The  
Thighes.

Aquarius,  
The  
Legges.

Bold fierie *Aries* ruleth Head and Face.  
In Necke and Throat doth *Taurus* challenge pface;  
Thetwining *Gemini* gouernes Armes and Hands,  
The Brest and Stomacke *Cancer* she commands:  
Then lustie *Leo* hath the Backe and Heart,  
Bowels and Belly is the *Virgo's* part;  
In Loynes and Reynes is *Libra's* liberties,  
And *Scorpio* rules the Stones and Priuities:  
The Thighes and Haunch is *Sagittarius* song,  
And both the Knees to *Capricorne* belong:  
*Aquarius* makes the Legs much aches feeble,  
And *Pisces* rules the Feet from Toe to Heele.

Ianuarie hath xxxj. dayes.

White. 1632.

A Prognostication for  
this yeare of our Lord God,

1632.

Being the *Bissextile*, or Leape-  
yeare.

VWherein is conteyned the state  
of the whole Yeare; the disposition of  
each Quarter; and the Inclinati-  
on of the Weather for every Quar-  
ter of the Moone through-  
out the whole Yeare.

With the rising and setting of the Planets,  
Husbandry Aduertisements, and other  
*things fit to bee knowne, both plea-  
sant and profitable.*

Also, at the end of the Booke, is the whole  
*Almanacke, conteyned in one Lease, for this*  
Yeare 1632. which being cut out, is fit to be  
placed into a Table-Booke, Booke  
of Aecompt, or other.

By Iohn White, Well-willer to the *Mathematicks*.

L O N D O N,

Printed by *A. Math.* for the Company of  
Stationers. 1632.

*A briefe Declaration of the  
Disposition of the foure Quar-  
ters of this Yearc.*

*And first of Winter.*

*The Winter Quarter best doth prophesiate  
To all Degrees, and Sexes, their estate.*

*Sol in Capricorne, Aquarius, Pisces.*

Inter (being the first Astronomieall Quarter) did  
take his beginning the last yeare 1631. vpon Mon-  
day being the 12. of December, at which time the  
Sun did make his first entrance into the beginning  
of Capricorne, and doth continue till Sunday, (this yeare) being  
the 11. day of March; In which time the Sunne finisheth this  
Quarters reuolution through these three Hyemal Signes, Ca-  
pricorne, Aquarius, and Pisces.

The vsuall qualitie of this Quarter, is to be cold and moyst  
(contrary to the nature of Summer) and is of the Phlegma-  
ticke Complexion, which humoz doth chiefly rule in our bo-  
dies from three of the Clocke in the afternoone till 12. of the  
clocke at night. Now doth the Sea-folt Mariners endure  
many a storme on the raging Ocean; the Windes are high and  
strong, making the billows of the Sea to swell and foame: The  
floods are high, the Ayre is cold & piercing, the Dayes are short,  
the Nights long, and the strength and vigour of euery Crea-  
ture decayeth. The pores of the earth are now enclosed and  
shut vp by the extreame coldnesse of the Ayre: Fowles get them  
to the warmest Regions, Beasts seeke for a Helter, Serpents  
betake them to their denues, and the Fishes get into the deepest  
of the Waters for their warmth and comfort: For whatsoeuer  
the cheerefull Spring and comfortable Summer did produce  
and nourish, this Quarter doth destroy and vanish. The moze  
cold and drye the Winter is, most wholesome for Man & Beast:  
Yet too much cold killeth Plants and Trees in a cold Climate:

## A Prognostication.

**M**oyst and warme Winter is an enemy to Nature, but a friend to Husbandry, and indifferent toye of Snow doth weaken the Earth, and preserveth Come. Now for the preservation of our healths, it is fit that we should use such Meates whose operation are of a hote and drye qualitie, expelling the colde and unwholesome ayre with good Fires, warme Broathes, comfortable Drinckes, and strong Wines: And be carefull to keepe thy Head and Feete from colde and wet: But yet can the body digest more grosse and strong Meates then in Summer, by reason that naturall heate is drunken (by the coldnesse of the ayre) into the inward parts of the body, to comforte the vitall Spirits, and to helpe digestion.

The usuall Infirmities of this Quarter, are these (or the like) as Coughes, Coughes, Pales, Colicues, Sores Eyes, Rheumes, Crampes, Tooth-ach, Catarrhs, Sciatickes, Sturcs, &c.

---

## The Second part of the Yeare called the Spring.

*The Spring compared isto Infancy,  
To spring and grow in Vertue till we dye.*

Sol in Aries, Taurus, Gemini.

**T**he Spring (the most comfortable Quarter of all the yeare) beginneth when the glorious Sun entereth into the first degree of the first Equinoctial Signe Aries, which is upon Sunday the xi. day of March, and continueth till the Sun hath travell'd through these three Vernall Signes, Aries, Taurus, & Gemini; and this quarter doth end upon Tuesday the xxi. day of June.

The naturall quality of this Quarter, is to bee hot and moyst, participating of the Sanguine Complexion: which humour hath most predominance from now a Clocke at night till three of the Clocke in the morning. Now are the dayes and nights of an equall length, and the replendant Sonne becomes to smile upon the face of the new recovered Earth, causing it to produce all kinde of varieties to our Senses. This of all the other Quarters of the yeare, is the most pleasant and wholesome

White. 1632.

Some, it being the most convenient time to remoone Diseases of a long continuance, and to prevent those which are like to ensue. Now doe the Birds of the ayre couple and breed, Beasts of the Earth increase, and the Fishes of the Waters doe multiply in abundance, forsaking the deepe to live in more shallow places: And now the Earth bringeth forth all sorts of Flowers, Herbes, Fruits and Plants, for the needfull use of Man and Beast. The Spring over-wet increaseth Weedes, causing Fruits to be scarce and rotten: It is fitting for the preservation of our healths, that we now use such Meates as are of a colde and drie qualitie; and let your Drinckes be more coole & small then in Winter: And it is now the best time to Purge, Bathe, Bleede, and Sweat, if need require.

The common Infirmities of this Quarter, are Small-pocks, Measels, Scabs, Pustles in the face, Agues, Kings euill, &c.

---

### Of the third part of the Yeare, called Summer.

*Like Man in his chiefe state and lusty yeares,  
The ripening Summer Quarter best appears.*

Sol in Cancer, Leo, Virgo.

Summer taketh beginning when the bright eye of heaven (the Sun) entereth into the first and highest Pointe in Tropique of Cancer, which is vpon Twelue day the xii. of Iune, and doth continue till Thursday, the xiii. of September, in which space of time he passeth through these three Solstitiall Signes, Cancer, Leo, Virgo.

The proper nature of this Quarter is to be hot and dry, participating of the Cholericke Complexion, which humour doth chiefly gouerne from 3 of the Clocke in the morning, till 9. before noone. Now is the Sunne at the highest, causing the dayes to be at the longest, and nights shortest. Meate is at the highest, floods at the lowest, Seas most quiet, and the Winds most calme: And now is the fruitful Earth clothed in her richest embroidery, imparting of her store to all sensible Creatures for their vse and comfort: Flowers are in their beautie,

## A Prognostication.

and Fruit in their delicate: and the painefull Bees gathereth their Honey for their future sustenance: Now naturall heate is dispersed abroad vnto the outward parts of the Body, & Man is not so hot within as in Winter, neither can he digest such grosse and strong Meates, as then; yet the most small and coole Drinkee are most comenient for our heales, and little store of Meates doth best suffice Nature, and those which are bowled are most wholesome, and vse such things as are of a cold and moist qualitie: An over-wet Summer rotteth Fruite, and destroyeth Corne.

The usuall Sickneses of this Quarter, are Fevers, Pestilence, Jaundies, Agues, paine in the Head and Belly, &c.

---

## Of the fourth part of the Yeere, called Autumne or Haruest.

*As Autumne Reales the sappe from Tree and Flower,  
So Death comes creeping neerer euery houre.*

Sol in Libra, Scorpio, Sagitari.

**A** Vumne, or Haruest (commonly called the Fall of the Leaf) doth begin when the Sunne entereth into the first degree of Libra, which is vpon Thursday the xiiij. of September, where he maketh the second Equinoctiall, and continueth till Wednesday being the xiiij. day of December; in which time he passeth through these three Autumnall Signes, Libra, Scorpio, Sagitari.

The naturall qualitie of this Quarter is to be cold and drie, taking the greatest part of the Melancholy Complexion, which Humour doeth chiefly reigne from ix. of the Clocke in the Morning, till 3. after Noone. The dayes are now againe equally ballanced with the nights; the Grasse is mowed, Corne reaped, Fruits gathered, and the painefull Husband-man reapeth the profit of his forpast labours: Now doeth the Earth lose the beautie of her former glorie, Flowers fade, Leues doe fall, Floods increase, and all Creatures looke their former strength & vigour, and the most part of sensible Creatures lecke for better against the stormie ensuing Winter: Of all other  
Quar=

White. 1632.

Quarters of the yeare this is the most unwholsome, breeding diseases of divers kinds in our bodies; therefore beware of the morning and evening cold, and use such things as are of a hot & moist quality: It is now a time (if need require) to Purge, Bath, and Bleed: An Autumne overwet putrifieth Grapes, making bad Wines, and scarcity of Fruite.

The diseases of this Quarter are many, as these, or the like, the Stone, paine in the Backe and Rionies, sore Eyes, Melancholy, Falling Sickness, Agues, Fluxes of Blood, Fistulacy, commonly attending Spleene, Emvods, &c.

The Rising and Setting of the Planets, with the disposition of the Weather, for every Quarter of the Moone for  
*this Yeare, 1632.*

January.

♄ Saturne is past the South at Sunset.

♃ Iupiter is neere the South at Sunne rising.

♂ Mars, looketh fire red in the East at Sunsetting.

♀ Venus shineth very bright at Sunsetting.

☿ Mercuri vshers the Sunne in the morning.

Last Quarter on Wednesday the iiii. day, halfe an houre past vii. of the clocke at night, Cloudie.

New Moone on Wednesday the xi. day, at one of the clocke in the afternoone, showe of Raine.

First Quarter on Thursday the xix. day, 50. min. past iiii. of the clocke in the morning, Snow, and windy.

Full Moone on Fryday the xxvi. day, 54. minutes past two of the clocke in the morning, wet.

February.

♄ Saturne is full South at Sunsetting.

♃ Iupiter is neere South-east at Sunrising.

♂ Mars is in the West at Sunrising.

♀ Venus is South-west at Sunsetting.

## A Prognostication.

☿ Mercurie is under the Sun beames.

Last Quarter on Friday the iij. day, 7. min. after iij. of the clocke in the morning, Snow.

New Moone on Fryday the i. day, 27. min. after ii. of the clocke in the morning, Frost

First Quarter on Saturday day the xliij. day, an houre after midnight, Windy.

Full Moone on Saturday the xxv. day, at iij. of the clocke in the afternoone, frost.

## March.

♄ Saturne is creeping toward the south at Sunne set.

♃ Jupiter is in the East before the Sunne.

♂ Mars is past the South at Sunne rising.

♀ Venus is past the South at Sun setting.

☿ Mercuri attendeth on his master the Sunne.

Last Quarter on Saturday the iij. day, 55. min. past ix. of the clocke in the morning, temperate.

Last Quarter on Monday the xxiii. day, 14. min. after x. of the clocke in the morning, windy.

New Moone on Sunday the xxx. day, 6. min. after lii. of the clocke in the morning, frost.

Of

## A Proghostication

### The Contents, Compas, Length, and Breadth of ENGLAND.

Thus much in Miles whole *England* it contains; 34866  
Thus much in Miles will reach about it round: —1890  
Her length from *Lizard-point* to *Berwick-straits*—334  
Twixt *Dover*, *Holy-head* the breadth is found. —250

### Of the severall Conquests of ENGLAND.

Of Ilands *England* was the greatest Ile,  
by *Iulius Caesar* first of Romans knowne;  
By Frenchmen next it was possess'd a while,  
by *Claudius Caesar* they were overthrowne,  
To whom, though they allegiance due did yeeld,  
yet still their Lawes and Customes they retain'd,  
Though they by Strangers then were foild in Field,  
to beare a Strangers yoke yet they disdain'd.  
Amongst all Nations *England* was the first,  
that entertain'd, the Gospel of the Lord,  
Till *Dioclesian* for blood did thirst,  
on all that to this Doctrine did accord.  
This land by *French-men* and by *Scots* oppress'd,  
the *Saxons* ayded it, and it enjoy'd,  
Till *Danes* did vanquish them, and it possess'd,  
who by the former People were destroy'd:  
And ever since, the Noble *Normans* race  
five hundred sixtie five yeares here remain'd,  
No Forreigne powers their Kingdome could deface  
such stout victorious Kings of them haue reign'd.  
Heavens keepe our royall King, our Queene, and Prince,  
Blesse Word and Sword our Foes for to convince.

The

The beginning, continuance, and ending  
of the Kings raignes since the Conquest with  
with the time how long it is since, to this Yeare 1632.

## A Prognostication.

The explanation of the former Table.

**N**Ote that every King began his raigne, the same time that the next precedent King ended his.

If you desire to know how long it is since the beginning of the raigne of any King, looke how long it is since the ending of the precedent King, and there you shall finde your request.

As for example: If you would know when King Henry the 8 began his raigne, how long he raigned, and also how long it is since his raigne: find out first his name amongst the names of the Kings, and searching the row towards the right hand, you shall finde he began his raigne in the yeare 1509 the 22 of Aprill, and under the title of the time that he raigned, is 37 yeares, 10 months, and 2 days: And looking forward in the same rowe, where is 123 yeares Aprill 22 under the title of since their raigne, and so long it is since he dyed.

How to iudge what Weather will follow,  
by the rising and setting of the Sunne,

**T**He Sunne rising bright and cleare, signifieth a pleasant day: If he rise fiery red, it promiseth raine: If in his rising hee bee thinly overcast with a cloud, it betokeneth foule weather: If the Sunne drive the clouds before him unto the West, it signifieth faire weather: If at his rising there appeare a circle about him, & vānished equally, it betokeneth fair weather. Also, if he settech red, it signifieth faire weather: If at his setting he be of divers colours, or clouds like water, it threatneth raine. If at the rising of the Sun, his beames seeme red, or long, or compassed with red clouds, it signifieth great windes: If at his setting there appeare a thicke mist, or if it raineth in the evening, it threatneth very foule weather to follow. Also, if the Sunne beames be spotted eyther greene, pale, or blacke, gathered to a cloud, it signifieth raine. The Sunne setting cleare without any cloud, signifieth a faire night to ensue. If the circle, or circles about the Sun be cleare, & of no continuance, looke for faire weather: If there be many circles, it signifieth windes: the redder they are, the more vehement winds. If the circles are heere and there broken, and are thicke and blacke, looke for cold wind or snow: Or, if he setle behinde a great black cloud, raine followeth.

How

## How weather is foreknowne by the Moone.

If the Moone in the third day of her change, or three daies before her full, or in the midst of the quarter, be found of pure light nothing encompassing her, the ends direct vp, she promiseeth fayre weather: but bent to red coloz, pronoketh winds. The Moone pale, or somewhat blacke or thicke, threatneth raine. When the Moone is five dayes olde, marke the tips of her hornes, if they be blunt, it signifieth raine: if sharpe poynted and pycking bywards, great winds. If in the fourth day after her change, she haue a red circle about her, it signifieth winds and raine.

## Of the iudgement of the weather by the Stars.

If the Starres appeare of much light, and seeme to be of more brightnesse & blazing then ordinary, it betokeneth great windes & moisture in that part where they seeme to: and in Winter, great frostes. When dimme Starres appeare with long fiery tayles, it threatneth winds, and great drought: the more in number, the greater will be the effect. Also, when Starres seeme to shoot or fall, it signifieth great winds in that place: If they seeme to shoot in diuers places, it signifieth diuers winds: If in all places, winds, thunder, lightning, and most tempestuous weather.

## A short Instruction, and very necessarie to know the times and seasons when to Sow, and replant all maner of Seedes for the Garden.

**S**ow Cabbages in Februarie, March, or Aprill, in the Decline of the Moone: and replant them in the Decrease.

Sow Cabbage-Lettuce in Februarie, March, or Iuly, in the old of the Moone.

Sow Onions and Leekes, in Februarie or March, at the Decline of the Moone.

Sow Beetes in Februarie or March, at a full Moone.

Sow

## A Prognostication.

Sow Coleworts white & greene, in the middle of August or September: Plant the young ones in October, and sett them againe in November.

Sow Parnepps in Februarie, Aprill, or June, in a fayre day.

Sow Radish in Februarie, Aprill, or June, in the increafe of the Moone.

Sow Pumpions, Cowmumbers, Pillions, and Courdes, in February, March, or June, in a hotte and fayre day.

Sow Spinage in Februarie or March, in the old of the Moone

Sow Parsely, Fennell, and Annis seede, in February or March at the full of the Moone.

Sow white Cicory in February, March, July, or August, in a full Moone.

Sow Cardus-benedictus in February, March, or May, when the Moone is old.

Sow Basil in March, in an old Moone.

Sow Parselaine in February, or March, in the increafe of the moone.

Sow Margerum, Violets, Time, Flower-gentle, Rosemary, & Lavender, in february, March, or Aprill, at the increafe of the Moone.

Sow Garden-crisses, and Rocket, in February, at the increafe.

Sow Savill in February or March, at a new Moone.

Sow Coplander, and Boyage, in february or March, at the Moones increafe.

Sow Harris-horne, and Samphire, in February, March, or Aprill, at an old Moone.

Sow Gillsflowers, Hearts-ease, and Wall-flowers, in March or Aprill, in an old Moone.

Sow Cardus, and Artichokes, in March or Aprill, when the Moone is old.

Sow Chick-wecs, in February or March, at the full of the Moone.

Sow Burnet in February or March, at an old Moone.

Sow Milop and Saurcy in March, when the Moone is old.

Sow double Marigolds in February or March, at the increafe of the Moone.

Sow Larkes-foote, Sparges, and Sperage, in February, in an old Moone.

Sow

## White. 1632.

Sow white Poppy, and Palma Christi in February or March, at the increase of the Moone.

Sow all manner of Corne the Moone increasing, the being in Cancer, Libra, or Aquarius.

Sow all kind of Seeds the Moone in Aries, Taurus, Cancer, Virgo, Libra, Capricorne, Aquarius, or Pisces: but those Seedes whose Rootes are round, should be sown thre or fower dayes before, or after the full Moone.

---

### *Certaine and short Rules, for the comforting of the chiefe officiaall Members of the Body of Man.*

Things which are good to comfort the Head.

**L**ignum-Aloes, Marisquum, Galingale, Muske, Rosemary, Riles, Camomell, Rue, Frankincense, Nutmegs, Hylop, Salute, Spits, and Gladen.

Things good for the Eyes.

Fennell, Aseruen, Cloves, Cold water, Cedrus, Eyebright, Riles, and Agrimony.

Things good for the Stomacke.

Nutmegs, Cloves, Origanum, Corall, Saffron, Quinces, Wormewood, Olibanum, Agrimony, Cameropy, Hailick, Lignum-Aloes, Spodium, and Coplander prepared.

Things good for the Heart.

Saffron, Cloves, Cinamon, Pace, Nutmegs, Marisquum, Burrage, Buglosse, Rosemary, Mirabolanes, Pearies, Lignum-Aloes, Corall, Muske, and Setwell.

Things good for the Liver.

Liverwort, great Raysons, Wormewood, Agrimony, Saffron, Cloves, Cedrus, Cloves, Fennell, Plantaine, Dragons, Rile-water, Lettuce, Violets, Sanders.

Things good for the Lunge.

Licoris, Raysons, Almonds, Dates, Lungwort, Maydenhaire, Lungwort, Elicampant, Distaces, and Penicotes.

## A Prognostication.

### *Things hurtfull for the Body.*

Meates hurtfull to the Teeth.

**N**Attes, Meates very hot, warme drinke, Sweete meates and drinke, Radish rootes, Hard meates, Bitter meates, Whike, much Clomiting, Leekes. Fatte of Fish, Colbroots, & Limmons.

Things hurtfull to the Eyes,

Garlicks, Onions, Radish, Dunkennesse, Letherie, Sweete and thicke Meates, Salt meates, Coleworts, all Pulle, Dust, Wine, Dust, Smoke, Fire, and reading presently after supper.

---

### *Rules of Mensuration.*

**A** Fingers bredth is foure Barly comes in thicknes; and an Inch thre Barly comes in length: A handes bredth foure fingers: A span is thre handes bredth: A foot is foure handes bredth: A Geometrical Palse is five foot: an English Pearch is fyt foot  $\frac{1}{2}$ . A Furlong is a hundred, & twenty five pases, or six hund: & twenty and huf foot: An English Furlong is six hundred and threescore foot, or a hundred thirtie two pases: A League is a thousand and five hundred pases: An Italian Mile is a thousand pases, or eight Furlongs: A common German Mile is thirtie two Furlongs. An English Mile is eight Furlongs: An Acre is fortie Pearches in length, and foure in bredth.

---

### A short Instruction for the Table following.

**N**Ote that the first Columne of Row, containeth the Names & number of Shires, the second of Cities, the third of Bishoprickes, the fourth of Castles, &c. Now goe straight in a line, and you shall easily finde the number Alphabetically, aswell for the English as for the Welsh shires: As for example, Buckinghams shire hath no Cite, no Bishopricke, 11. Parker Townes, no Castles, 189. Parishes, &c.

White. 16 3 2.

## The Times of Mariage prohibited by our Church.

From Advent Sunday (the 27. of November 1631) till 8. dayes after Twelfe day, being the 13. of January.  
 From Septuagesima Sunday (being the 29. of January) till the viii. day of April.  
 From Monday before Ascention day (being the 10. of May) till Trinitie Sunday being the 27 of May.

**A Table to know how many Howers and Minutes the Moone shineth euery Night in the Yeare.**

The age of the Moone encreasing.	The Houres and Minutes that she shineth.		The age of the Moone decreasing.
☾	Houres.	Minutes.	☾
1	0	48	29
2	1	36	28
3	2	24	27
4	3	12	26
5	4	0	25
6	4	48	24
7	5	36	23
8	6	24	22
9	7	12	21
10	8	0	20
11	8	48	19
12	9	36	18
13	10	24	17
14	11	12	16
15	12	0	15

**The vse of this Table.**

**S**Take the age of the Moone in the Almanack, then looke the same in this Table, which you shall find either in the increasing or decreasing, and then in the middle Coloume you shall without further labour find the time of her shining.

**A**s for Example: Upon the 20 day of January, I would know how many Howers and Minutes the Moone shineth: I find in the Kalender it is New Moone the 11 day, then reckoning from thence to the 20 day, I find she is 9 daies old: Then entering this Table, it sheweth, she shineth 7 howers and 12 minutes: So is it likewise when she is 21 daies old, &c.

## A Prognostication,

The explanation of a new and easie Kalender here  
following, for this present Year, 1632.

**N**ote that every Moneth containeth three rowes of Col-  
lumes, (the figures for the number of Dayes excepted) the  
first Colunne towards the left hand containeth the Weeke Daies  
and Sunday Letter. The second, the Signe wherein the Moone  
is every day. And the third, the Changes and Quarters of the  
Moone. Note that the being thus  figured doth signifie the  
new Moone: and placed this  way is the first Quarter: This  
 the full Moone; And againe this  the last Quarter. Note  
also, that the figures over the head of the Moones, doe signifie  
the houre of her Changes; and the Letters underneath, the time  
after noone, or after midnight, N. standing for after noone till  
Midnight, and M. for after Midnight till Noone.

As for example, Against the 4 day of January, being Wed-  
nesday, I doe finde the Moone in  Libra, and is thus  characterized, which is the last Quarter, at 7. of the clocke at  
Night.

Again, on the 10. day of March, being Saturday, I doe  
find the Moone in  Pisces, and is thus  characterized, which  
is new Moone at 5 of the clocke at night, &c.

Note also, that at the head of every Moneth is placed the Rising  
and Setting of the Sunne for the middle of every Moneth: As  
for example, for the midst of January the  Sun riseth at 7 of  
the clocke, and 43 minutes; and setteth at 4 of the clocke and  
17 minutes.

It also containeth (on the back-side of the leafe) for every Mo-  
neth, the Holy-dayes, and Feasts, both Movable and Im-  
movable; with the beginning and ending of every Terme:  
As Easter-day is on the 1 day of Aprill, Whit Sunday on the  
30 day of May; Terme begins on the 23. of January, and endeth  
on the 13. of February, &c.

# A briete and easie Kalender for this Yeere

1632. which being cut out, is fit to be placed  
into any Booke of Accompt, Table-booke, or  
other, conteyning the whole Almanacke, in  
a short method; By Iohn White.
